EDUCATION

Indian Institute of Technology, Madras

Chennai, Tamil Nadu

Bachelor of Technology in Electrical Engineering

Expected 2026

SKILLS

Languages: JavaScript, Python, C++, C, Bash, SQL

Frameworks & Tools: Node.js, React, Vite, FastAPI, Docker, Git, Linux

Cloud & Databases: AWS (EC2), DynamoDB, PostgreSQL, Redis

Architecture & Security: OAuth 2.1, PKCE, JWT, SSO, SRP, RBAC, REST APIs, Multithreading, System Design

WORK EXPERIENCE

Atomberg Intern

Feb 2026 – Present

Cloud & Backend Engineering

Remote

- Architected an **Identity Provider SaaS** on **EC2** using **Node.js** and **DynamoDB** to replace **Cognito**
- Implemented **OAuth 2.1** compliant flows with **authCode**, **PKCE**, and **JWTs** forged using **RS256** algorithm
- Engineered **multi-tenancy**, isolated **userpools**, and zero-knowledge **Secure Remote Password (SRP)** logins
- Integrated **Social SSO** (Google, Microsoft, and Apple) with dynamic configuration and provider toggling
- Developed a **React/Vite** admin and superadmin portal enforcing strict **Role-Based Access Model (RBAC)**
- Secured a **6-month internship extension** and **PPO consideration** on account of critical project delivery

PROJECTS

High-Performance Scalable URL Shortener – *Python, React, PostgreSQL* – [[repo](#)] [[live](#)]

Nov 2025

- Achieved **sub-50ms latency** by architecting a **FastAPI** system with **Redis** cache-aside strategies
- Designed a collision-free **Base62** algorithm on **Serverless PostgreSQL** to handle millions of unique records
- Engineered **asynchronous** background tasks to track real-time geo-analytics without blocking user requests
- Built a responsive **React** and **Tailwind** dashboard to visualize live system telemetry and traffic metrics

Multi-Threaded CLI Image Editor – *C++* – [[repo](#)]

Jul 2025

- Designed and developed a command-line **image editor** for Linux in C++ for low-level **pixel manipulation**
- Leveraged C++ multithreading to achieve a **64% performance boost** over sequential execution
- Implemented strict in-memory processing to eliminate **I/O race conditions** during concurrent batch operations

OPEN SOURCE CONTRIBUTIONS

Suckless.org (dwm) Upstream Contributor – *C, X11* – [[patch 1](#)] [[patch 2](#)] [[commit](#)]

Jan 2026 – Present

- Contributed 2 upstream patches to **dwm** (**nocornermonocle**, **fullscreen**) to optimize **X11** window logic
- Integrated **EWMH compliance** via X11 Atoms to control external compositor rendering for specific layouts
- Engineered a **state-preserving** fullscreen toggle caching layout history to resolve view switching loops

Automated Linux Development Environment – *Bash, POSIX sh* – [[repo](#)] [[scripts](#)]

Jul 2021 – Present

- Architected a **reproducible** system config with custom bootstrap script for dependency/symlink automation
- Integrated **15+ discrete tools** (Neovim, Zsh) into a unified workflow ensuring **zero-configuration** deployment
- Authored cross-distro installation docs, garnering **100+ stars on GitHub** for modularity and clarity

RELEVANT COURSEWORK

Operating Systems and Lab, Probability and Detection Theory, Linear Algebra, Machine Learning Techniques
Functional and Logic Programming
